

Ajun Jo

4th year Statistics & Computational Mathematics double major in University of Waterloo
Waterloo, Canada | 905-651-5768 | joajune03@gmail.com | [Snapshots.Me](https://snapshots.me) | [GitHub](https://github.com) | [LinkedIn](https://www.linkedin.com/in/ajunjo)

QUALIFICATIONS & TECH STACKS

Data Analytics: Python, SQL, R, Matplotlib, Excel and Power BI

Programming: Python, C, C++, and Linux

AI / Machine Learning: TensorFlow, PyTorch, NumPy, Pandas, Scikit-learn and AWS SageMaker.

EDUCATION

University of Waterloo

Waterloo, Ontario, Canada

Double major in Bachelor of Honours Statistics and Computational Mathematics | Minor in Computing

Sep. 2021 – April 2026

Relevant Coursework:

- Probability, Statistics, Applied Linear Models, Statistical Sampling Design, Data Visualization, Data Structures, Optimization, OOP, Data-Intensive Distributed System, Neural Networks

Awards:

- University of Waterloo President's Scholarship

Extracurriculars:

- Prev. Event exec. Data Science club; hosting/building data science projects and presenting to students
- Prev. Event exec. UW Korean Christianity club; Creating events, leading weekly gatherings
- **Sports:** Semi-comp league Basketball Intramural, beginner level soccer Intramural (Placed first in league)

EXPERIENCE

Financial Data Analyst Intern

Toronto, Ontario | Jan. 2025 - Present

Scotiabank

- Identified data needs and conducted **data analysis** to optimize branch network performance using Excel / Power BI
- Analyzed business processes by leveraging data-driven methodologies to identify inefficiencies, quantify potential benefits and design solutions for productivity improvements
- Developed and presented actionable insights through **data modeling**, benchmarking and **predictive analytics** supporting strategic decision-making using Python.

AI Data Engineer Intern

Etobicoke, Ontario | May 2024 - Aug. 2024

Vosyn

- Reduced **data processing time by 30%** through data pipelining, streamlining I/O streams, while ensuring data accuracy, and preparing multilingual datasets for training Text-to-Speech models
- Tested, and debugged the realignment code that synchronizes the translated speech and lip movements (dubbing)
- Optimized Text-to-Speech model by writing a script that reduced background noise, elevating output voice quality

Private Math Tutor

Niagara Falls, Ontario | May 2022 - July 2022

Self-Employed

- Provided clear and constructive feedback to the student highlighting her weakness and the areas of improvement, resulting in **over 20% rise** in the student's mark in math class.

PROJECTS

Student Database Management (SQL)

Nov.2024 – Dec.2024

Project Summary: A comprehensive database system to manage student records, such as grades, major, courses, etc.

- Designed, modified and implemented relational database structures with foreign key constraints to maintain data integrity across various entities
- Utilized SQL queries such as data aggregations, joins, subqueries and window functions to identify top-performing students and extract insights by generating trend for academic performance

Text-to-Speech Model Denoiser (Co-op)

June 2024 – July 2024

Project Summary: A production level script that runs through audio files that denoises background sounds

- Developed a Python script that reduces interruptive noises on Text-to-Speech (LLM) model outputs
- Had been utilized in Voice Cloning products at previous internship, the result **significantly increased the output voice quality** by providing clear audible sounds and clarifying the speaker's vocal
